

MAGNETIZING BOX – CHARGER

INSTRUCTION MANUAL

A no-power magnetizing box uses strong, permanent magnets inside to create a powerful magnetic field that aligns the magnetic domains in magnets that require 're-charging'.

PLEASE NOTE THAT IT WILL NOT MAGNETIZE NEODYMIUM OR CERAMIC MAGNETS.

Check and match the magnetic poles with the poles of the magnetizing box.

The poles should attract.

Slide the alnico magnet into the magnetizing area. When removing, slide the magnet away from the magnetizing area in a horizontal position.

Safety:

Students should use this product under supervision.

The magnet inside the box is high powered – keep small metal objects away from the box.
