

# Light Box Upgrade

## PA2060-050 Light Box, Lamp Socket, Cable, 2 x Lamps U/G Kit 'QI'

.This is an upgrade KIT consisting of a new socket with cable and keeper together with two new style 'QI' or 'Halogen' 12V 30W globes. Refer to instructions above for fitting the new style socket.

### Fitting Instructions For New Socket Into Old Model Light Box:

This is the IEC new style lamp socket that accepts the new style 12V 30W two pin 'QI' or 'Halogen' lamp. The socket is complete with integral 4mm banana sockets, power cable and 4mm banana plugs moulded to the ends of the cable.

The old metal socket is twisted and removed from the top panel and the new socket engaged in the same hole. Notice that the students cannot twist to remove it. The open end of the flat plastic 'keeper' is slid through the end opening in the box to engage the groove provided in the socket.

The small pips on the face of the keeper must be pressing against the underside of the Light Box top plate and the keeper must be pressed on its thick edge to slide all the way into the groove in the socket to retain it firmly into place.

### Fitting Instructions for a 'QI' Globe:

Working through one of the open sides of the box, the two pins on the globe can be inserted into the two holes in the socket and the globe pushed fully into the socket.

**NOTE: To avoid finger prints being fused on to the surface of the glass, do not hold the globe with the fingers. During insertion, hold by the small plastic bag provided with the globe.**
